**Wilmington Machinery
Releases New Capabilities DVD:
“SMART IDEAS. SMARTER RESULTS!”**

Wilmington, NORTH CAROLINA --- With the high cost of travel and the difficulty of giving up precious quality time from the plant, many processors and end-users have found it more difficult to visit suppliers. With that in mind, Wilmington Machinery, designers and builders of cost effective, highly specialized, quality processing machinery, brings their plant and machinery to your desktop via a new DVD.

Wilmington’s “**SMART IDEAS. SMARTER RESULTS!**” DVD reviews some of the innovative machinery Wilmington has been responsible for developing for the plastics industry. These include: the first Rotary Injection Molding for Structural

Foam, first Two Station Large Platen Machine, first Six Layer coextrusion system and first Six Layer Rotary Blowmolding System, just to name a few. The DVD also provides viewers an overview of some of Wilmington's current machine offerings such as the Small Bottle Rotary Blowmolding System and Lumina Structural Foam Series. A brief tour of the plant and some of the faces of the Wilmington Machinery Team, lead by President Russ LaBelle are also featured. In addition viewers will hear Russ LaBelle's summary of Wilmington Machinery vision for machine building and why the company is the one manufacturer to consider if you need high output specialized process machinery that is innovative and cost productive.

For 35 years, Wilmington Machinery has been designing and building high speed rotary blow molding machines, structural injection foam machines and specialized machinery for the injection molding industry.

For a copy of the DVD or any additional information about Wilmington Machinery contact: Jeff Newman, Phone: (910) 452-5090.
